

Process and explanation:-

⇒ User part

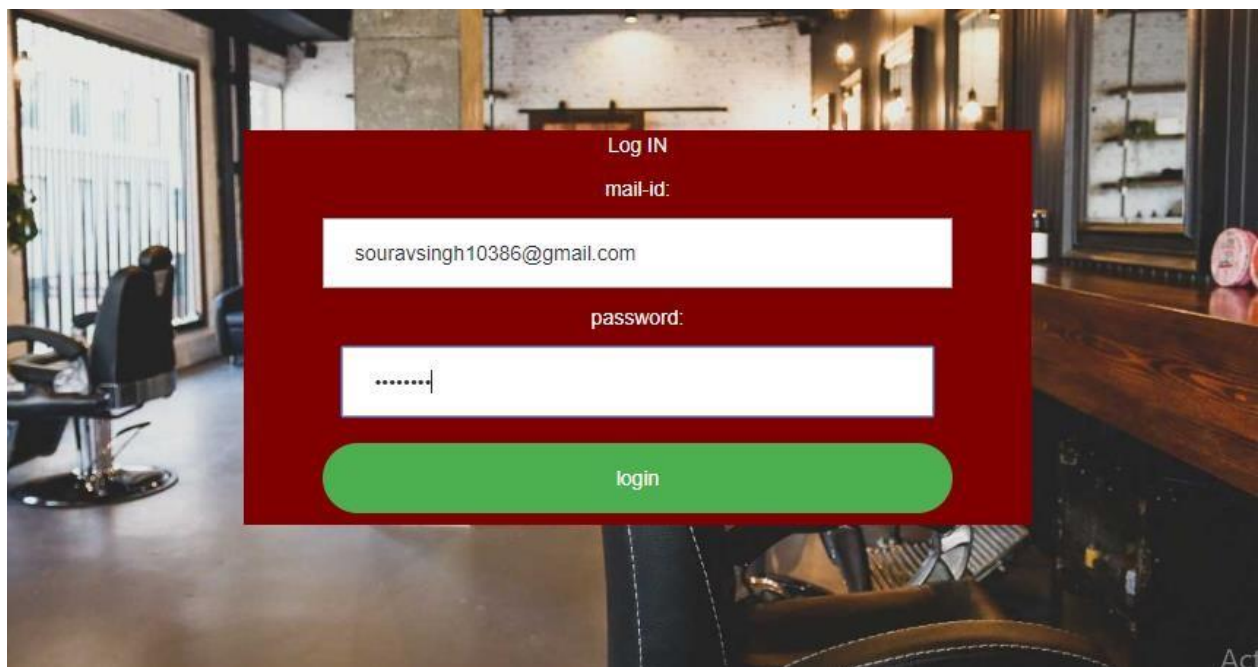

First we will move to the `home.php` where user can either click on indoor or outdoor button ,user can also straight away go to the login page by clicking on the login button

If the user click on indoor button it will be navigated to the `inbox.php` (similarly for outdoor button we will navigate to the `outbox.php`)

After checking the facilities either from [indox.php](#) or [outbox.php](#) ,when user will click on the book now button it will be navigated to the [login.php](#)

If user doesn't enter anything:-

email Missing

If the username and password exists in the database it will create a cookie and will navigate to account page

```
<form action="dbloginform.php" method="post" style="background-color:maroon;">
  <p style="color:white;">Log IN</p>
  <p> <p style="color:white;">mail-id:</p>
  <input name="email" type="email" value="<?php if(isset($_COOKIE["email"])){echo $_COOKIE["email"];}?>">
  </p>
  <p><p style="color:white;">password:</p>
  <input name="password" type="password" value="<?php if(isset($_COOKIE["password"])){echo $_COOKIE["password"];}?>">
  </p>
  <input type="submit" name="submit" value="login">

</form>
```

Dbloginform.php:- (you can check all the important functionalities related to login form in dbloginform.php)

```
if($email === "root@root.com" && $pass === "Root@123"){
    header('Location:admin.php');
}
else{
    $sqltb1="SELECT * FROM userdata WHERE email='$email'";
    $res=mysqli_query($conn,$sqltb1);
    if(mysqli_num_rows($res)>0){
        while($row = mysqli_fetch_assoc($res)){
            if($pass === $row["password"]){
                setcookie("email",$_POST["email"],time()+3600);
                setcookie("password",$_POST["password"],time()+3600);
                $_SESSION['username']=$row["firstname"]." ".$row["lastname"];
                $_SESSION['first']=$row["firstname"];
                $_SESSION['last']=$row["lastname"];
                $_SESSION['id']=$row["id"];
                $_SESSION['email']=$row["email"];
                $_SESSION['tel']=$row["telephone"];
                $_SESSION['img']=$row["img"];
                header('Location:account.php');}
            else{
                header('Location:login.php');
            }
        }
    }
    else{
        echo "not a member";
    }
}
```

Email and password cookie:-

auto_saved_sql_sort	▼	✕

Domain	localhost	
Path	/malegrooming	

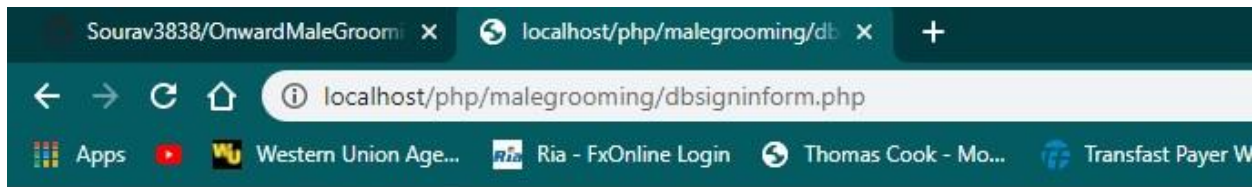

Where if the user is not an existing member they click on the sign up button which will navigate to the signin.php(* if a person goes to sign up page and has registered with an email id that already exists in the database then it will not create a new account but will give an error that an account with same email id already exists)

You can see all the functionalities related to signup page in dbsignupform.php

The screenshot shows a web browser window with the address bar displaying 'localhost/php/malegrooming/signin.php'. The page features a dark header with the 'ONWARD' logo and navigation links for 'HOME', 'ABOUT', and 'CONTACT'. The main content area has a background image of a barbershop and a prominent red sign-up form. The form includes the following fields:

- first name:
- last name:
- email id:
- address:
- password:

An 'Activate Windows' watermark is visible in the bottom right corner of the browser window.

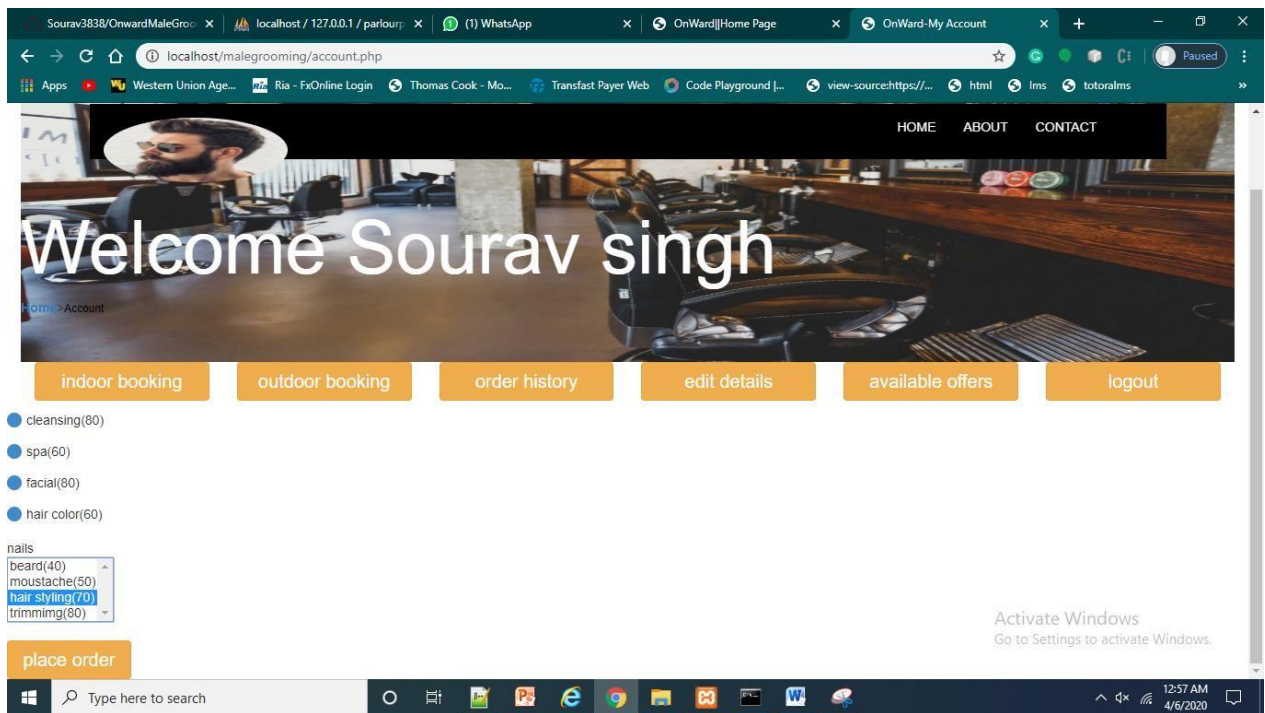

After creating a account it will navigate to login page

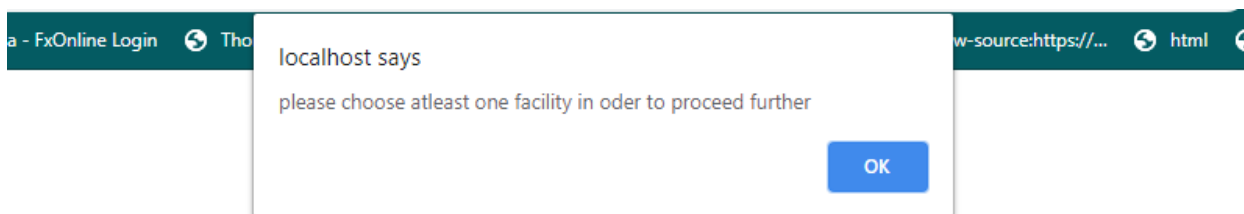

After successful login a **cookie will get created** ,user will go to their account (i.e **account.php**)with their profile picture and name on it

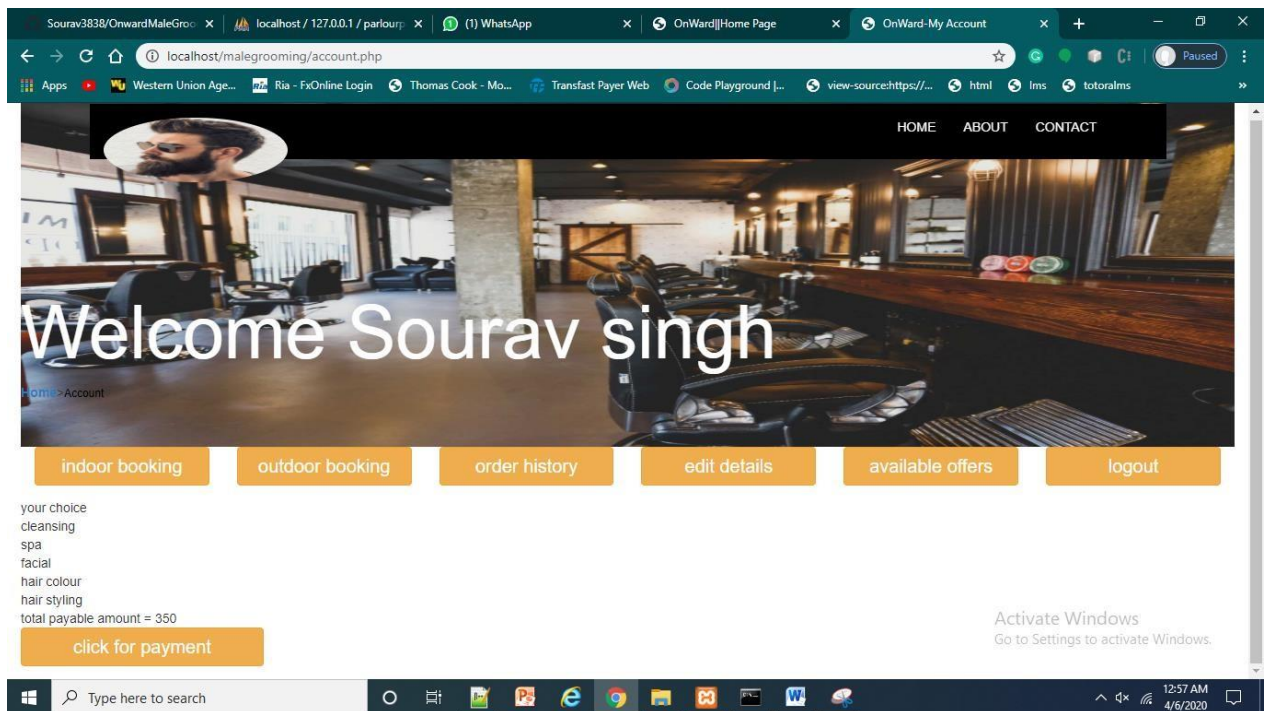

Profile picture given by the user at the time of sign up gets stored into the database as well as the pic folder inside malegrooming folder

```
$img=$_FILES['img1']['name'];  
  
$temp_name=$_FILES['img1']['tmp_name'];  
  
$filepath="pic/$img";  
  
$file_type=$_FILES['img1']['type'];  
  
if($file_type=="image/jpeg")  
{  
    move_uploaded_file($temp_name,$filepath);  
}
```

If the user will click on the indoor booking or outdoor booking these check box will appear then after clicking on the desirable options click on place order (* note if the user will not select any value and click on the place order button then and alert will be shown and no further order placement will be done)

After clicking on the payment button (either for indoor or outdoor) it will navigate to the payment page where basic details of the user like their name ,order items ,total amount and their email id will already be set as a value of the input fields. With the help of `$_SESSION` these values were sent from account.php to the payment page

(* note for indoor boking the payment page is paymentindoor.php and for outdoor payment it is paymentoutdoor.php the only reason why I did so is because when a user will make a payment for indoor automatically the category in the database will get stored as indoor and similarly when the user will make an outdoor payment the category in the database will get changed into outdoor ;for both the action at the beginning will be “wait for the response”)

```
$random=rand(1000,9999);
$sql_query="INSERT INTO orders(userid,email,address,userorder,amount,artist_id,entry_time,entry_date,
category,orderid,action,cardholder,cardnumber) VALUES('$id','$email','$added_address','$total','$amount'
|,'$selected_artist','$added_time','$added_date','indoor',$random,'wait for the response','$cardholder','$cardnumber')";
if(mysqli_query($conn,$sql_query)){

    $_SESSION['orderid']=$random;
    echo "<center>your order id is ".$random;
    echo "<form method='post' action='account.php'>
    <input type='submit' name='final_in_order' value='back to my account'>
    </form></center>";
}
else{
    die('error!!!'.mysqli_error($conn));
}
}
```

id :- 26
first name :- Sourav
last name :- singh
payable amount :- 350
your choices :- cleansing,spa,facial,hair colour,hair styling,
address:

zipcode:

time:
date:
select the artist

Accepted Cards

Name on Card

Credit card number

Exp Month

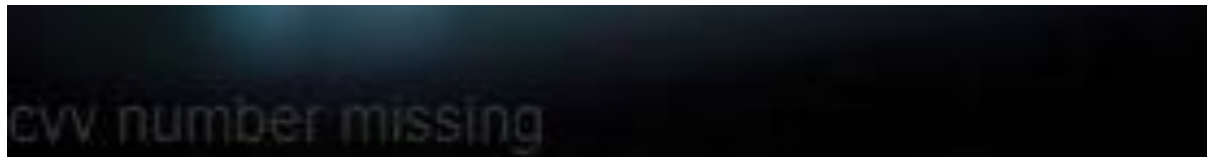

Exp Year
CVV no.

Validations on this page are as follows: all fields are required, zipcode should be of 6 in length, time and date should be in a particular format, credit card number should be in 1111-2222-3333-4444 format, exp month has a length of at least 4 to 12, exp year should have 4 digits and cvv should have 3 digits.

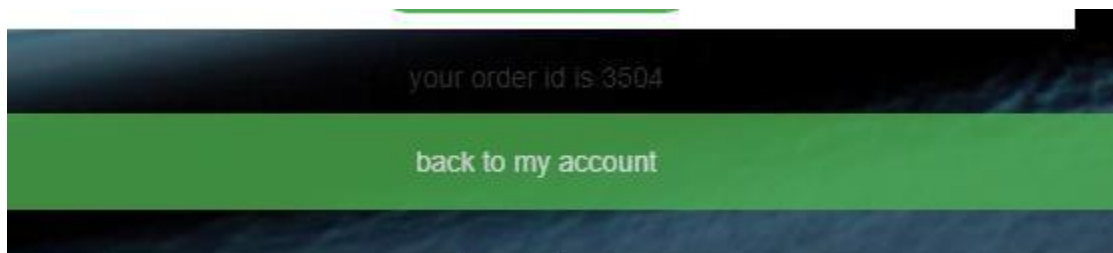

For indoor payment you can see all the functionalities in `paymentindoor.php`

For outdoor payment you can see all the functionalities in `paymentoutdoor.php`

(* note in case of violation of these validations and error will appear on the bottom right corner)

After successful payment it will generate a random number of 4 digits (I have used **rand function** within a **range of 1000 to 9999**)

After going back to our account user can check there order history (by clicking on detailed info button user will get detailed information about the order id that he/she will provide in the input box)

By clicking on the edit detail a number of input fields will appear, **not every field is compulsory** to be filled so even if the user fill only first name out of all fields then it will get updated.

By clicking on available offers user can see all the offers that the admin provides from his account.

```

if(isset($_POST['offers'])){
    $files = scandir("C:/xampp/htdocs/malegrooming/uploads");
    for($a = 2;$a <count($files);$a++){
        ?>
        <p> <?php echo $files[$a];?>
        <a href ="uploads/<?php echo $files[$a];?>" download="<?php echo $files[$a];?>">
            download</a>
        </p>
    <?php
    }
}

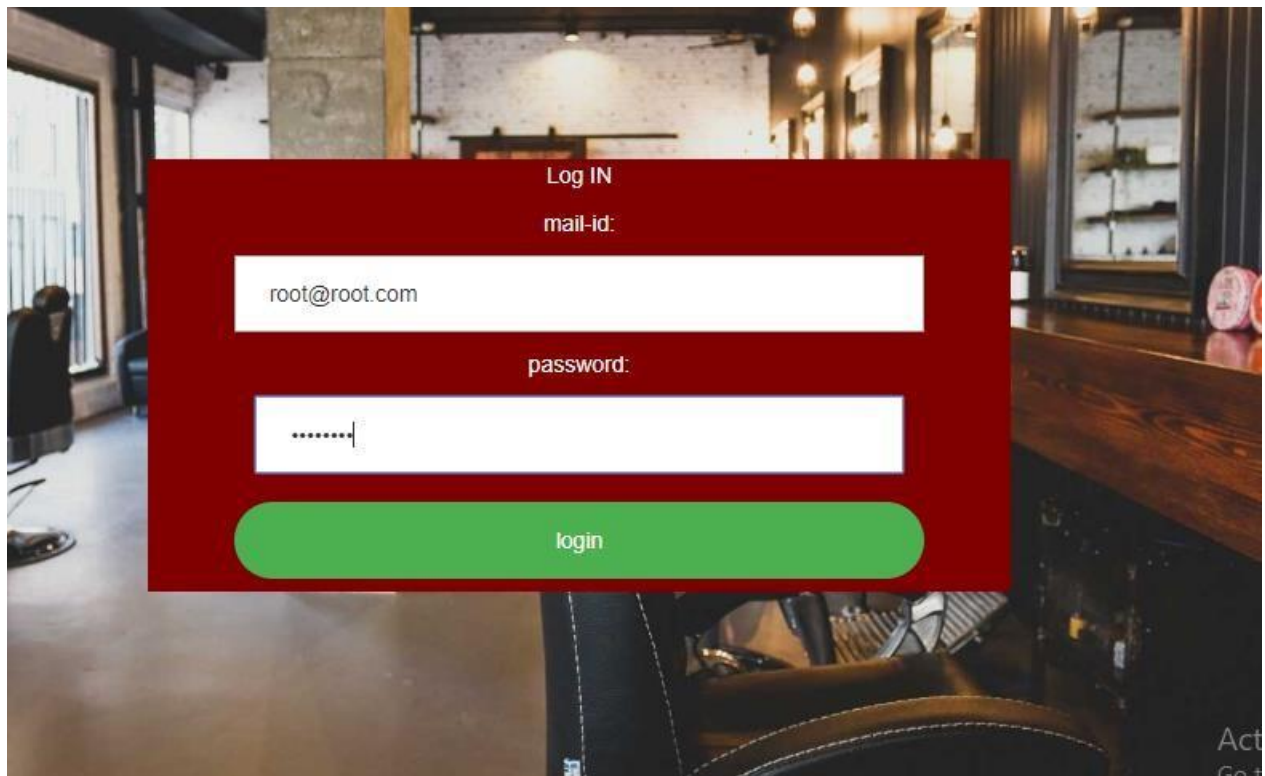

```

Logout will delete the cookie and take the user back to the login page.

⇒ Admin part

Admin user name:- root@root.com

Admin password:- Root@123

After successful login admin will go to the admin.php

Welcome Admin

Navigation buttons: total appointments, pending appointments, confirmed appointments, cancelled appointments, all users, logout, all artist, add artist, delete artist account, offers.

Search bar: enter order id:

user id	email	registered address	facilities booked	total amount	time	date	category	orderid	status
6	musi@gmail.com	faridabad	facial,nail,spa,haircut	390	16:56:00	2020-03-31	outdoor	5366	confirmed
6	musi@gmail.com	goraya	spapedicureoption1	160	16:06:00	2020-03-21	indoor	4100	wait for the response
23	som@rajput.com	jammu	nailshaircut	250	15:56:00	2020-03-17	outdoor	1531	confirmed
3	musi@gmail.com	dsf	spa,	60	14:05:00	0053-03-24	indoor	3526	wait for the response
25	ns1324y@gmail.com	pasla	spa, facial, acrylic extension,	210	15:06:00	0089-03-08	indoor	5960	confirmed
25	ns1324vi@gmail.com	ofwhedb	spa, facial, acrylic extension,	210	16:07:00	0009-04-06	indoor	9370	confirmed

Total appointment will show all the appointments, confirm and cancel button will show all the appointments that are confirmed and cancelled.

(* at the beginning all appointments will be in the waiting list which can be seen once admin will click on the pending button)

Welcome Admin

Navigation buttons: total appointments, pending appointments, confirmed appointments, cancelled appointments, all users, logout, all artist, add artist, delete artist account, offers.

Search bar: enter order id: enter action:

user id	email	registered address	facilities booked	total amount	time	date	category	orderid	status
6	musi@gmail.com	goraya	spapedicureoption1	160	16:06:00	2020-03-21	indoor	4100	wait for the response
23	musi@gmail.com	dsf	spa,	60	14:05:00	0053-03-24	indoor	3526	wait for the response
25	ns1324y@gmail.com	mumbai	cleansing,spa, facial, hair colour, hair styling,	350	15:06:00	2020-03-06	indoor	3504	wait for the response

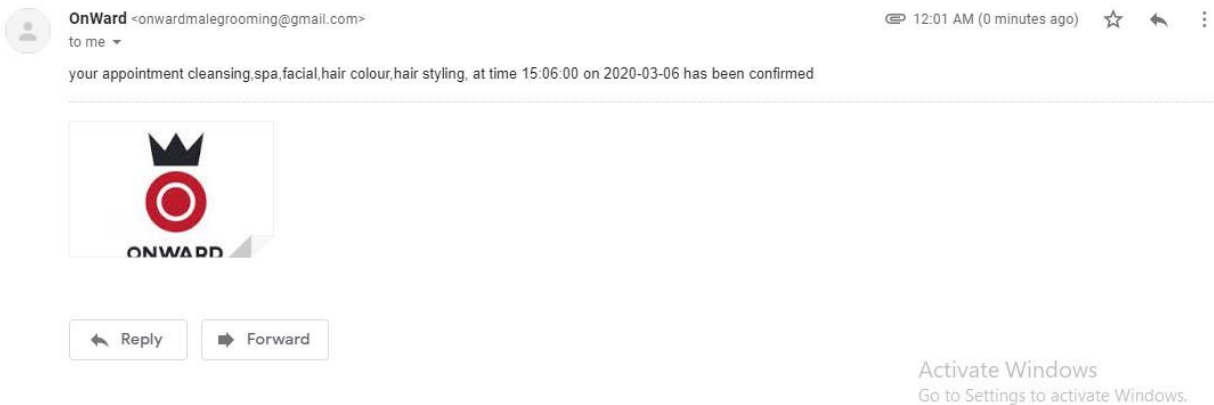

total pending appointments- 3

If the admin wants to confirm any appointment he will enter the order id of that particular order and type confirmed in the action input ,after clicking on the action button , the page will load for a while because it is going to sent the confirmation mail to that particular email id. That's why it is important to use a working email id.

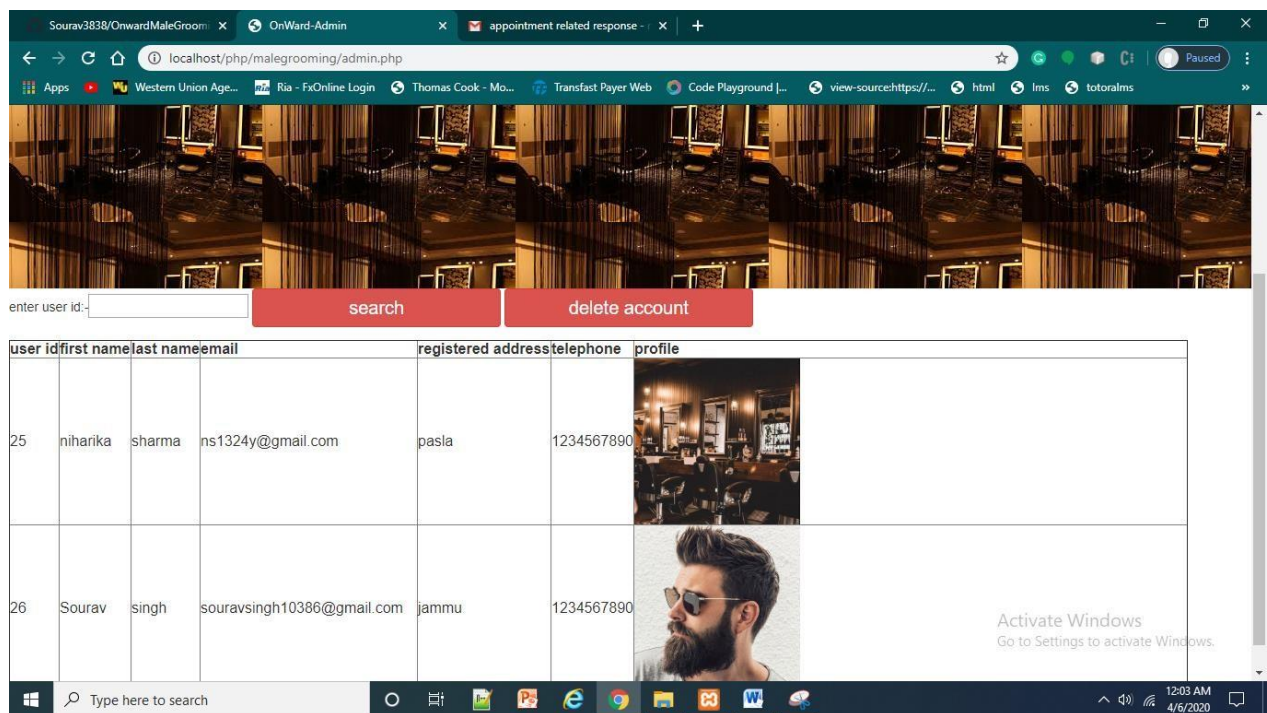

Code for mail sending in admin.php

```
if(mysqli_num_rows($res)>0){
    while($row = mysqli_fetch_assoc($res)){
        require('class.phpmailer.php');
        require('class.smtp.php');
        require('PHPMailerAutoload.php');
        $mail = new PHPMailer;
        $mail->SMTPDebug=0;
        $mail->IsSMTP(); // Set mailer to use SMTP
        $mail->Host = 'smtp.gmail.com';
        $mail->Port = 587;
        $mail->SMTPAuth = true;
        ///////////////////////////////////////////////////
        $mail->Username = 'onwardmalegrooming@gmail.com';

        $mail->Password = 'Onward@123';
        $mail->SMTPSecure = 'tls';
        $mail->From = 'onwardmalegrooming@gmail.com';
        $mail->FromName = 'OnWard';
        $mail->AddAddress($row["email"]);
        $mail->IsHTML(true);
        $mail->Subject = 'appointment related response';
        $mail->Body = 'your appointment '.$row["userorder"].' at time '.$row["entry_time"].
        | ' on '.$row["entry_date"].' has been '.$orderaction;
        $mail->AddAttachment("images/logo.jpg");
        if(!$mail->Send()) {
            echo 'Message could not be sent.';
            echo 'Mailer Error: ' . $mail->ErrorInfo;
            exit;
        }
    }
}
```

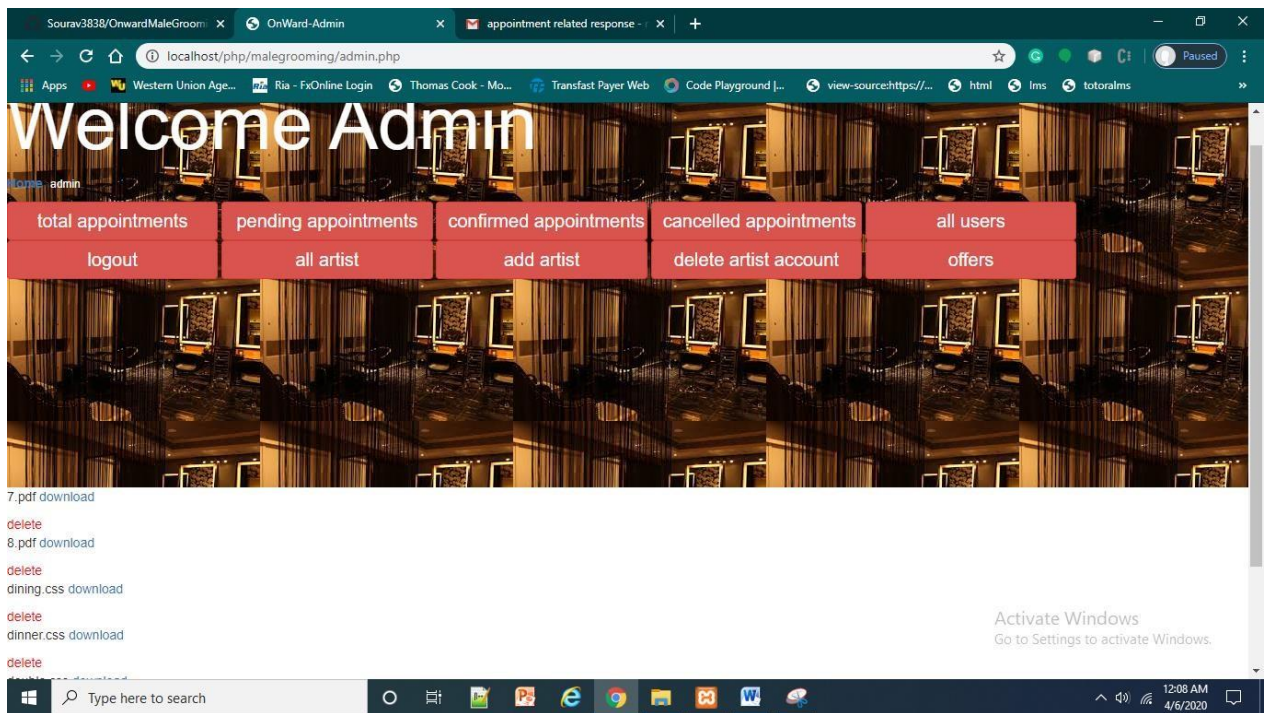

Similar admin can see all the users and delete them as well

Same functionalities are applied on the all artist,add artist(no two artist can have same telephone number),delete artist.

Admin can also delete the offers that are expired,deleted offers will no longer be visible to the user

(* note : for offers functionality there is a folder named uploads in this project ,I have used scandir(name of the folder) and with the help of loop I have displayed the files along with download and delete option ,for delete it with navigate to the delete.php along with the name of the file and with the help of unlink(\$_GET["name"]); I have deleted the file)

By clicking on the logout button, admin will log out from his account.
